

# UNIFIED PLATFORM FOR CONTAINER BUSINESS MANAGEMENT

Automation for container terminals and logistics companies: tracking, tariffs, repairs, document flow, and control of all operations in one system.

# CONTAINER BUSINESS CANNOT BE MANAGED MANUALLY

## PAIN POINTS

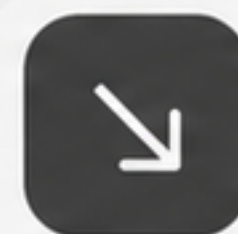

When processes are managed in Excel, email and notes, speed, control and money are lost

Fragmented tracking of containers, services and finances

Time lost on manual entry and reconciliation

No unified system for client interaction

Errors in statuses, repairs, charges and documents

No single window for controlling operations

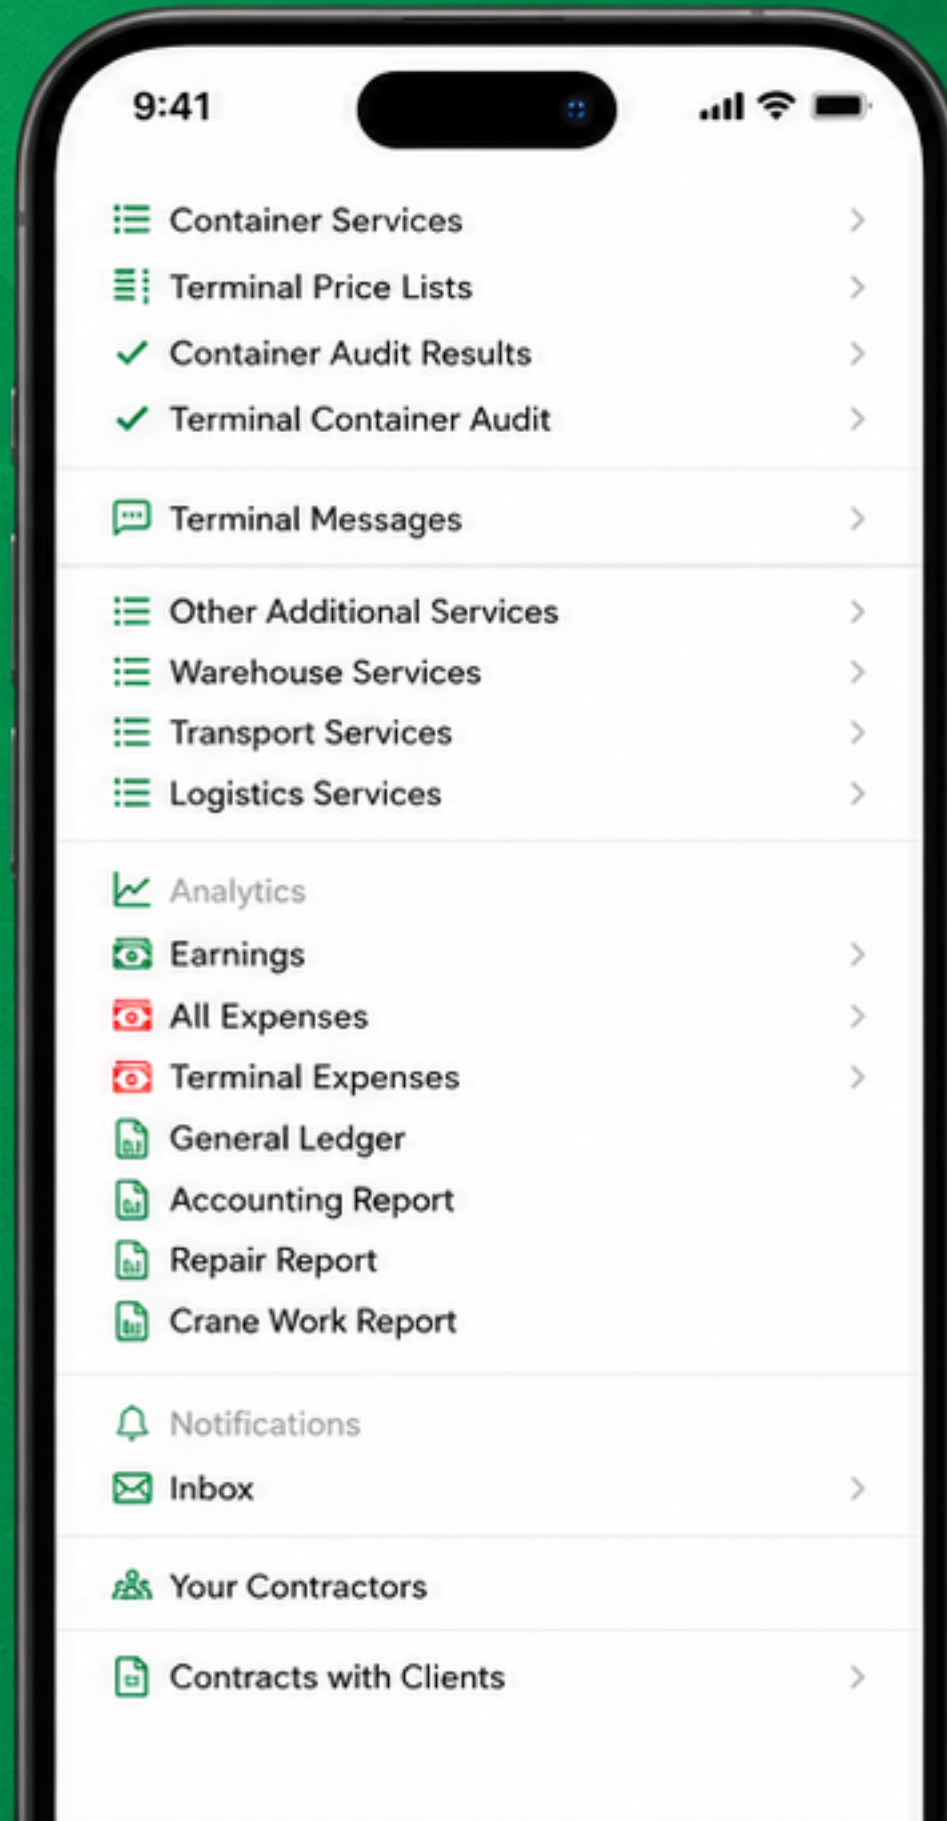

# SOLUTION WITH ICONDIS

ICONDIS is a web platform that synchronizes terminal, employee and logistics-company processes in one digital workflow

## Operational module

- Tracking of containers, storage, stuffing/unstuffing, repairs, PPR and additional services
- Address-based storage and placement control
- Current container statuses and automatic document completion

## Financial module

- Automatic service tariff calculation
- Calculation of storage, PPR, repairs and additional services
- Automatic summary financial registers, reports and invoicing
- Revenue control by clients and services

## Integrations and data exchange

- Integrations with 1C, Excel, EDI
- Data exchange with clients and partners
- API for system expansion

## Client module

- Online requests and personal account for clients
- Real-time container status tracking
- Submitting requests and approving tariffs without calls or email
- Access to documents, invoices and operation history

## Management module

- Flexible setup of roles and access rights for employees
- Control of your staff and operations
- Complete activity history in the system
- Online data access 24/7

## AI module

- Recognition of data from containers
- Automation of acceptance
- Fewer errors and faster processes

# FOR WHOM IS ICONDIS

## For terminals

manage operations, staff and finances

### Terminal manager

- analytics and real-time operation control
- transparency of income and expenses
- terminal workload and KPI on one screen

### Receiving inspectors

- mobile container acceptance
- photo capture and condition control
- work from a phone directly on site

### Manager

- review and process client requests
- approve or reject in the system
- control workload and priorities

### Repair department

- assign repair tasks
- control defects and repairs
- history of requests and operations

### Equipment operators

- tasks and priorities online
- control container placement
- fewer calls and less confusion

## For logistics companies

control transportation, operations and expenses

### Commercial director / Head of logistics department

- full control of containers and operations
- transparency of expenses and charges
- analytics and calculations across all directions

### Managers

- submission of requests for container acceptance and release
- real-time container statuses
- fast interaction with terminals

### Document and finance department

- invoices, acts and registers online
- history of charges and payments
- data and report export to Excel

# HOW IT WORKS

## AT THE TERMINAL

All terminal processes in one system — from container acceptance to financial reporting

### Container acceptance

- container registration
- photos and documents
- condition recording
- request verification

### Placement and storage

- placement on site
- storage-period tracking
- movement control

### Operations and services

- PPR: gate in/out
- repairs and inspections
- additional services: warehouse, transport, logistics

### Control and statuses

- status tracking
- real-time movements
- operation history

### Charges and documents

- auto-calculation of storage, PPR, services and repairs
- invoices and statements

### Container release

- release processing
- document verification
- operation completion

### Transparency

full visibility of all operations and statuses

### Control

control of staff, processes and terminal workload

### Automation

less manual work and fewer errors, faster operations

### Revenue

revenue control and improved efficiency

# HOW IT WORKS

## FOR A LOGISTICS COMPANY

Full control of your container fleet — wherever they are

### 1 Unified tracking

- adding a container to the system
- specifications, documents and owners
- grouping by types, clients and projects

### 2 Fleet tracking

- at terminals and depots
- in transit (truck, rail, sea)
- under repair
- leased
- at warehouse / client site

### 3 Status control

- current status of every container
- movement and operation history
- planned events and deadlines

### 4 Operations management

- creating requests
- approval with terminals and partners
- fulfillment control

### 5 Finance and documents

- auto-calculation of storage, PPR, services and repairs
- invoices, acts and closing documents online
- payment control

### 6 Analytics and reporting

- fleet movement and utilization
- expenses and income by container
- KPI efficiency
- report export

### Transparency

full visibility of all operations and statuses

### Control

no lost containers or downtime

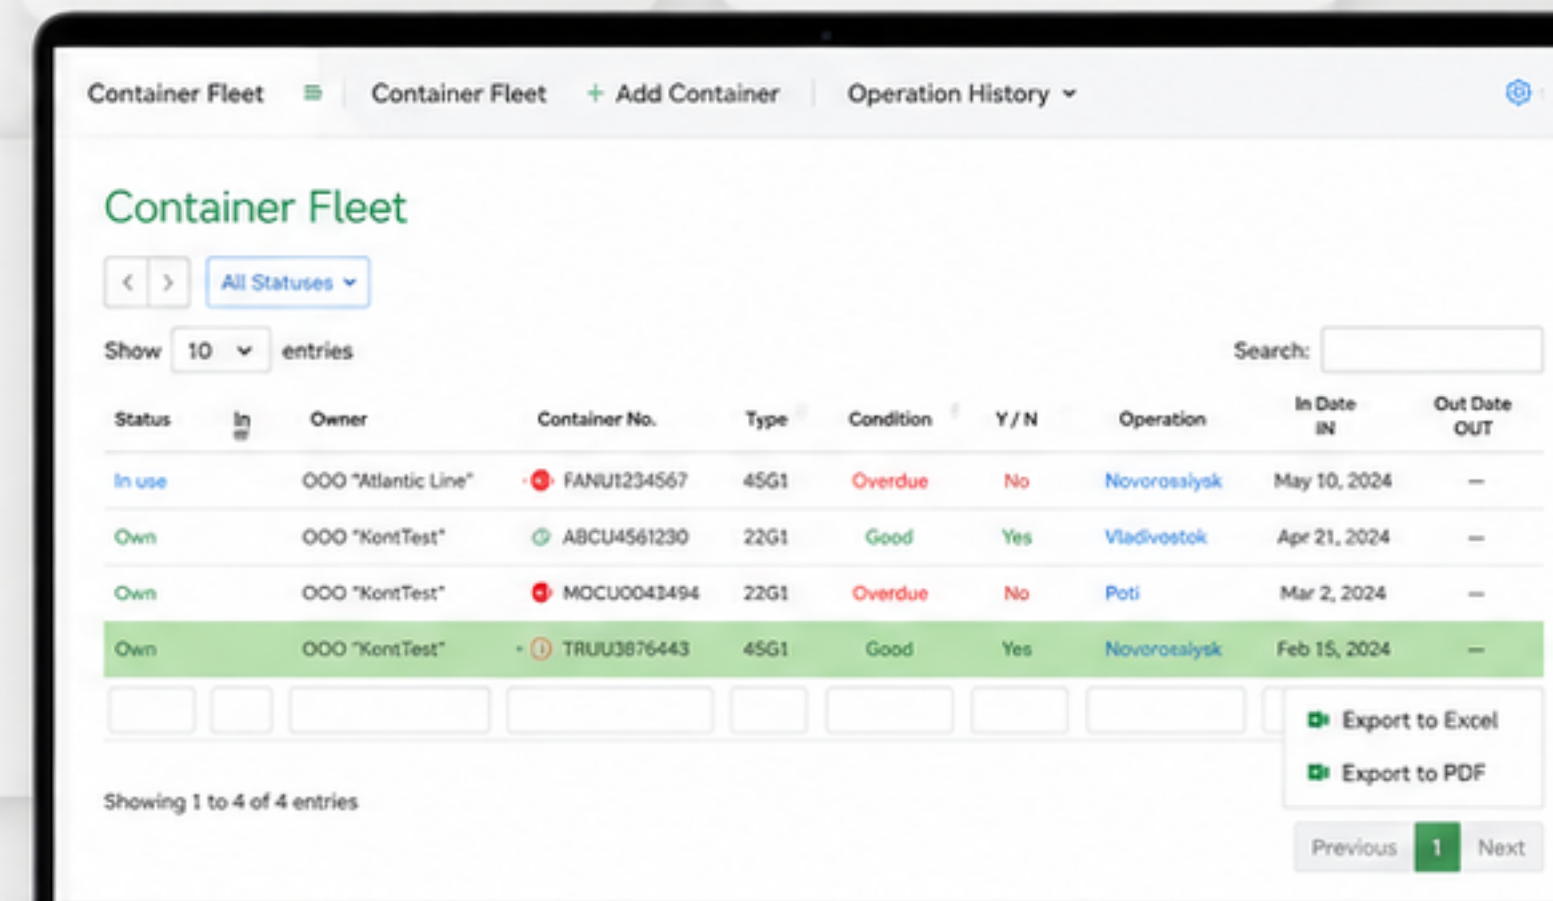

### Time savings

processes in one window

### Cost optimization

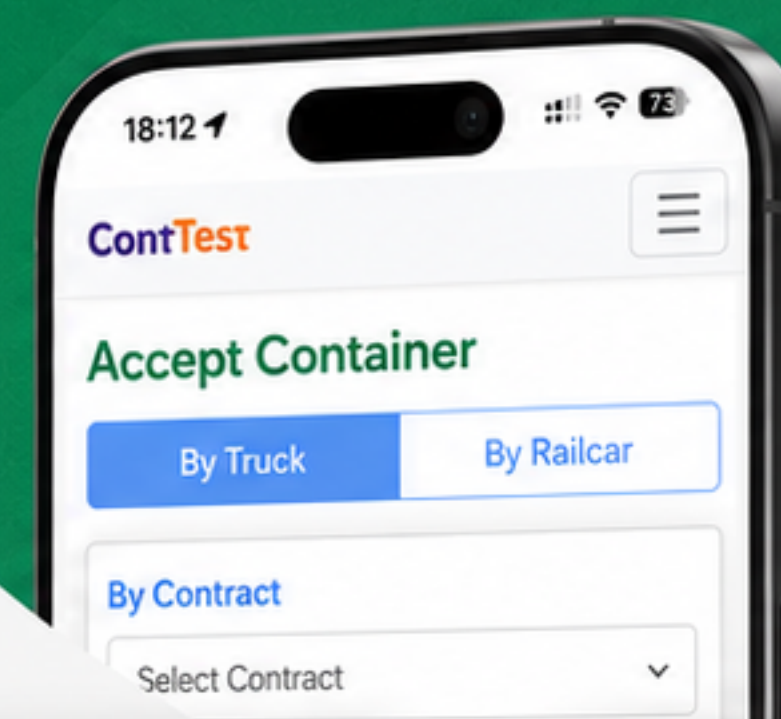

transparent calculations

| Status | In | Owner               | Container No. | Type | Condition | Y / N | Operation    | In Date IN   | Out Date OUT |

# FUNCTIONAL CAPABILITIES

## Client portal

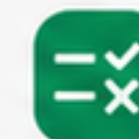

- container tracking, storage history, invoices and acts — all in one place
- photo capture upon arrival and departure
- fewer calls — faster service

## Convenient tracking of all operations

- tracking all container operations
- flexible tariffication with individual discounts
- adding new services
- handling road and rail transport

## Reduce routine work and errors

- documents are generated automatically
- repair, storage or acceptance certificates are formed from system data
- templates with logos and signatures are loaded in advance

## Increase transparency

- the full document history is in one place
- an acceptance act and photos are attached to every container
- no need to search in emails or chats
- the client always has a copy in their account

## Gate control

- arrival and departure recorded with photos, time and driver data
- access-mode setup
- safety and order on site

## Online shift tasks

- crews receive tasks online
- photos and location data are entered directly into the system
- clear responsibility zones and completion control

## End-to-end cargo and container tracking

- tracking different cargo types by properties
- weight and photo recording from the PPR site
- container stuffing with maximum allowed weight control
- tracking transshipped cargo between truck, warehouse and container

## Warehouse analytics and control

- warehouse occupancy monitoring with capacity accounting
- loading, operation and cargo-movement reports
- decisions based on current data

## Time savings

automation of routine processes

## Fewer errors

data is entered once and used everywhere

## Higher profit

cost control, flexible prices, individual terms

## Satisfied clients

faster service, transparency, convenience

# AI MODULE IMPLEMENTED

Recognizing data from photos of container doors speeds up acceptance, reduces manual-entry errors, and improves record accuracy

# WHY CHOOSE ICONDIS **ICONDIS**

Everything you need for efficient terminal management and a high level of service for your clients

## **Unified system for the terminal and clients**

All processes and documents in one solution

## **Cloud access 24/7 from any device**

Work from the office, home or on the road — all you need is the internet

## **Flexible setup of roles and access rights**

Assign permissions to employees and partners for specific tasks

## **Automatic tariffing, invoicing and reporting**

Invoices, acts and reports are generated automatically — less manual work and fewer errors

## **Reliability and data security**

Modern protection technologies and backup copies ensure the safety of your data

## **Fast launch and support**

Quick start, team training and ongoing support at every stage

## **Product development for your tasks**

Regular updates and new capabilities based on feedback

# UNIFIED PLATFORM FOR CONTAINER BUSINESS MANAGEMENT

One Platform.  
Total Container Management.
